

Note: If tutorial task is not completed then do complete the tutorial task once. After the tutorial task is completed follow the workshop task points.

1. As per the coursework, user can go to home page even without logging in. So, open the authenticationFilter.java file and add such code that will open the home page even when user is logged in as well as not logged in.
2. Remember that the home.jsp page should show login button if user is not logged in. And when user is logged in it should show logout button.
3. In home page, trending products should be shown in first. Then all the product should be shown according your arrangements and user interface design.

Take this wireframe as an example.
